**Detailed Action**

Rejection of claims under 35 USC 103(a) as being obvious over JP '631 in view of Szoka or BE '401 in view of Szoka will not be maintained. Applicant provides results to illustrate the criticality of the range being claimed.

***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 4,6-8,10,12,14-19 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for a related subgenus of compounds of formula II (see compound in Tables of specification) used in instant composition and method of promoting plant growth, does not reasonably provide enablement for using all instant compounds as plant growth stimulators as claimed. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the invention commensurate in scope with these claims. Because the structures of formula II are many and have different sizes, polarity and electronegativity, the activity of compounds of formula II would be questionable. The predictability in this art is high since a small change in a functional feature could result in a drastic change in activity and such a change can also result in an opposite effect or activity (plant growth inhibitor. To one of ordinary skill in the art, it would be a big job to determine the effect of all of the claimed compounds which would provide desired activity (plant growth stimulation) in the instant composition and method. Because of this large burden (determination of which compounds would render desired results), Examiner would like to point

out that Applicant would be entitled to a subgenus of what is being claimed. Examiner stresses that the subgenus created should be a group of related compounds in terms of size, polarity and electronegativity for the instant composition and method. In addition, Examiner suggest that the subgenus of compounds selected should be highly structurally related to the compounds used in the working examples.
